Vehicle Rental System

Building Reports, Dashboards, and Custom Pages (UI Builder)
for the Vehicle Rental Management Application

01 • AIM

To design and build custom reports, an interactive dashboard, and a custom page using Zoho Creator's UI Builder for the Vehicle Rental Management application, and carry out booking-management actions through purpose-built interfaces layered on top of the base Rental_Booking_Report.

- APPLICATION: Vehicle Rental Management
- BASE FORM: Vehicle_Rental_Booking_Form
- TOOL: Zoho Creator — UI Builder

02 • DESCRIPTION

The rental agency's information needs were reviewed against the existing Vehicle_Rental_Booking_Form data, identifying the need for vehicle-type filtered report views, an at-a-glance dashboard, and a single booking page combining charts, reports, and quick-access controls.

- Rental_Booking_Report — A spreadsheet view listing every submitted vehicle rental booking.
- Vehicle_Type_Wise_Booking_Report — A List/Chart view grouped by Vehicle_Type and plotted against Rental_Duration to compare demand across vehicle categories.
- Booking Status Kanban — A Kanban-style board view grouping booking cards by Vehicle_Type and Booking_Status.

Each report's Criteria pane was used to set filter conditions, and the Columns option hid fields not relevant to that view.

03 • PROCEDURE

A new dashboard page, Rental_Booking_Page, was built using the Board Builder. Widgets were added and bound to the reports created above.

- 1. List Widgets — Total Bookings and Booking Status Overview — running counts by Vehicle_Type and Booking_Status.
- 2. Donut Chart — Vehicle_Rental_Booking_Form — vehicle-type share of total bookings.
- 3. Column Chart — Booking-status distribution (Confirmed, Pending, Waitlisted, Cancelled).
- 4. Line Chart — Preferred_Pickup_Time plotted across the day.
- 5. Embedded Report — Rental_Booking_Report table placed beneath the charts.
- 6. Action Button — “View All Bookings” for a one-click drill-through to the full list.

04 · OUTPUT

Fig. 1 — Rental_Booking_Page: stat cards for Total, Confirmed, Pending, Waitlisted and Cancelled bookings, with Donut and Column charts

Fig. 2 — Embedded Rental_Booking_Report table placed beneath the dashboard charts

Widget Layout: List panels on top, Donut and Column charts side by side beneath them, the Line chart and embedded report following, and the “View All Bookings” button anchored at the bottom.

Live Dashboard — Booking Overview

- 20 — Total Bookings
- 4 — Confirmed
- 2 — Pending

Fig. 3 — Live dashboard: booking counts by Vehicle_Type and Booking_Status, with Donut and Column charts on the published app

Sidebar drill-downs: Request Kanban → All Requests → New Request

All_Bookings_Report — Sample Records

The 'All Request Report' table displays a list of booking records. The table has columns for Type, Category/Event, Date, Status, Details, and Notes/Response. The status 'Under Review' is highlighted in purple. The table shows three records, all with a status of 'Under Review'.

Type	Category/Event	Date	Status	Details	Notes/Response
Public Feedback	Traffic Management	02-Jul-2023	Under Review	Concerns about intersection safety	Investigating with traffic dept.
Public Feedback	Recycling Program	04-Jul-2023	Under Review	Suggestions for improvement	Forwarded to environmental dept.
Public Feedback	City Zoning	06-Jul-2023	Under Review	Inquiry about new zoning regulations	Response with zoning information

Fig. 4 — All_Bookings_Report: sample booking records with Status = “Under Review” and internal follow-up notes

05 .RESULT

The Vehicle Rental Management application was successfully enhanced with custom reports, interactive dashboards, and vehicle-type/status-based booking analysis. A “View All Bookings” feature was also added for quick access to complete rental details.
