

Integrating a Zoho Creator application with another Zoho service using connections and APIs

Vehicle Service Request Dashboard — Zoho CRM Integration Use Case

Indhumathy.K
241401030

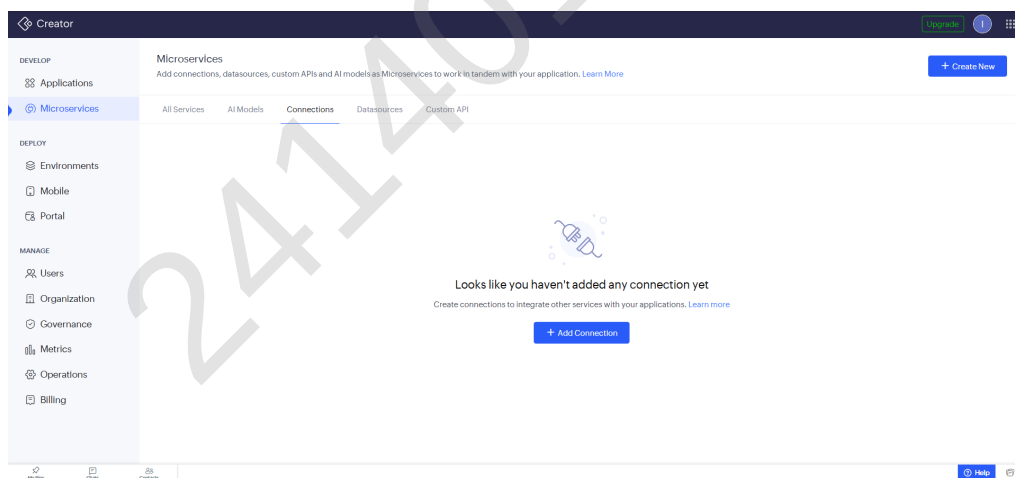

1. Aim

To integrate a Zoho Creator application with Zoho CRM using a microservice connection, a form workflow, and Deluge scripting, so that the details submitted through a Creator form are created automatically as a Lead record in Zoho CRM.

2. Procedure

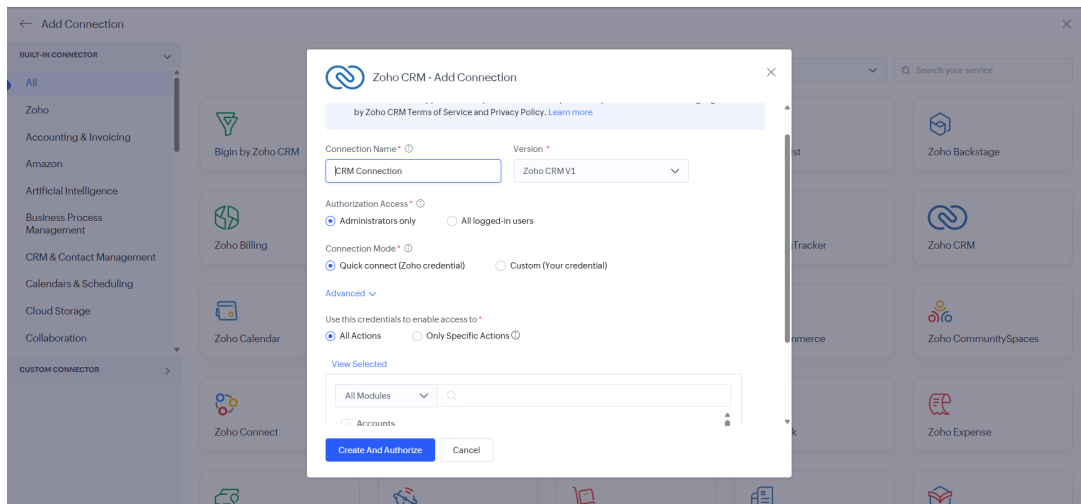

Phase A: Creating the Zoho CRM Connection

- 1 Log in to your Zoho Creator developer account and open the Vehicle Service Request Dashboard application.
- 2 In the left navigation panel under the Develop section, click **Microservices** to access the centralized integration environment.
- 3 Open the **Connections** tab. Since no connection exists yet, the page shows “Looks like you haven't added any connection yet”. Click **Add Connection**.

The Microservices page with the Connections tab selected and no connections added yet; the Add Connection button is used to start.

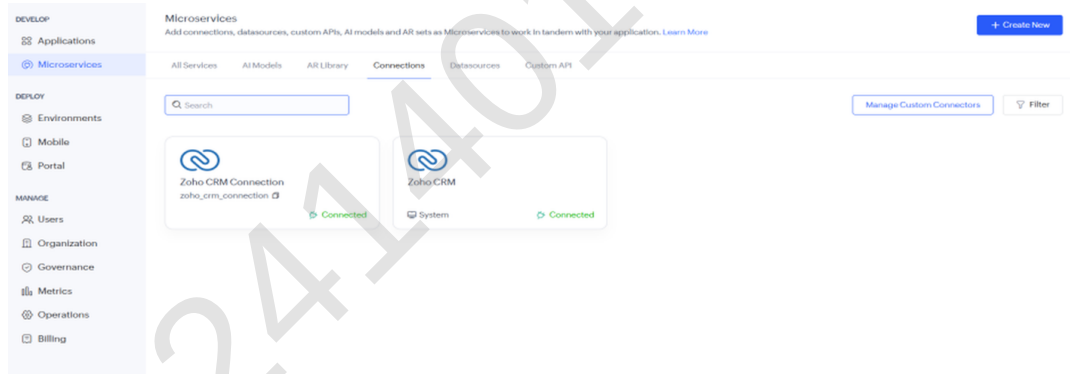

- 4 From the Built-in Connector list, select **Zoho CRM**. In the Zoho CRM – Add Connection dialog, enter the Connection Name (CRM Connection) and keep the Version as Zoho CRM V1.
- 5 Set Authorization Access to **Administrators only**, Connection Mode to **Quick connect (Zoho credential)**, and enable access to **All Actions**. Click **Create And Authorize**.

The Zoho CRM – Add Connection dialog with Authorization Access set to Administrators only, Connection Mode set to Quick connect (Zoho credential), and access enabled for All Actions, followed by Create And Authorize.

Phase B: Verifying the Connection and Application References

- 6 After authorization, return to Microservices > Connections and confirm that the Zoho CRM Connection card appears with the link name `zoho_crm_connection` and a green **Connected** status.
- 7 Click the Zoho CRM Connection asset to open its settings. Inspect the permissions granted to the connection and confirm that the Vehicle Service Request Dashboard application is switched **On** under Connection Access.

The Connections tab listing Zoho CRM Connection (link name `zoho_crm_connection`) and the system Zoho CRM connector, both showing the Connected status.

Phase C: Setting Up the Form Workflow

- 8 Navigate back to the application, select the form that submits the request (Admission Enquiry Form), and click the **Workflow** tab in the top header.
- 9 Create a new form workflow that executes on **Created** > **Successful form submission**.
- 10 In the Add New Action panel, set **Run this action** to *Always*, so that every successful submission is sent to Zoho CRM, and choose **Deluge script** from the Action type grid.

Phase D: Compiling the Deluge Script Code

- 11 In the Deluge editor, initialize a map named `leadInfo` and map the form fields to the Zoho CRM Lead fields: `Student_Name1` to `Last_Name`, `Email_Address` to `Email`, `Contact_Number` to `Phone`, and `Preferred_Course` to `Description`.
- 12 Call `zoho.crm.v8.createRecord("Leads", leadInfo, Map(), "zoho_crm_connection")` to create the Lead record through the connection link name, and store the result in `response`.
- 13 Use `info` statements to trace the start of the CRM action and the response returned by Zoho CRM.
- 14 Click **Save** to run the compiler validation and save the script.

Deluge Script

Admission Enquiry Form > Created > Successful form submission > Successful submission

```

1 info "CRM ACTION STARTED";
2 leadInfo = Map();
3 leadInfo.put("Last_Name",input.Student_Name1);
4 leadInfo.put("Email",input.Email_Address);
5 leadInfo.put("Phone",input.Contact_Number);
6 leadInfo.put("Description",input.Preferred_Course);
7 response = zoho.crm.v8.createRecord("Leads",leadInfo,Map(), "zoho_crm_connection");
8 info "CRM RESPONSE:";
9 info response;
10

```

The Deluge Script editor for the workflow (Admission Enquiry Form > Created > Successful form submission > Successful submission). The script builds the leadInfo map, calls `zoho.crm.v8.createRecord` for the Leads module using the connection `zoho_crm_connection`, and traces the response using `info`.

3. Output & System Verification

The integration between the Creator application and Zoho CRM was set up through a microservice connection and a Deluge workflow. As seen in the Microservices interface, the Zoho CRM connection is established and available.

- **Connection Diagnostic Result:** Connected (Green Status Verified)
- **Operational Availability:** The connection link name `zoho_crm_connection` is referenced in the form workflow script.
- **Target Module:** Records created by the workflow are added to the Leads module of Zoho CRM, shown below.

Lead Name	Company	Email	Phone
Christopher Maclead (Sample)	Rangoni Of Florence	christopher-maclead@noemail.invalid	555-555-5555
Carissa Kidman (Sample)	Oh My Goodknits Inc	carissa-kidman@noemail.invalid	555-555-5555
James Merced (Sample)	Kwik Kopy Printing	james-merced@noemail.invalid	555-555-5555
Tresa Sweely (Sample)	Morlong Associates	tresa-sweely@noemail.invalid	555-555-5555
Felix Hirpara (Sample)	Chapman	felix-hirpara@noemail.invalid	555-555-5555
Kayleigh Lace (Sample)	Printing Dimensions	kayleigh-lace@noemail.invalid	555-555-5555
Yvonne Tjepkema (Sample)	Grayson	yvonne-tjepkema@noemail.invalid	555-555-5555
Michael Ruta (Sample)	Buckley Miller & Wright	michael-gruta@noemail.invalid	555-555-5555

The Zoho CRM Leads module, the destination module for records created by the `createRecord` call in the workflow.

4. Conclusion

The lab exercise demonstrates how to connect a low-code application to another Zoho service using microservices, form workflows, and custom Deluge scripting. By linking the form submission to the `zoho_crm_connection` connection, the Vehicle Service Request Dashboard project establishes a working proof-of-concept in which submitted details are pushed automatically into Zoho CRM as Leads.
